## EUROLUCE

### DAVIDE GROPPI

Redefining lighting to give infinite possibilities, Infinito is an 18mm stainless steel light strip, which could extend up to 12m in length at a time. It follows a simple concept of attaching a LED strip to a metal strip to produce an indirect ambient source of indoor lighting. The intensity of the luminance varying according to need is quite revolutionary - a light like a tape measure that can be cut to any desired length, and is bright enough to light up an entire room. | [www.davidegropi.com](http://www.davidegropi.com)

► Besides INFINITO, Davide Groppi's collection was full of fantasies and fantastic stories that are all worth exploring. ◀

### DCW ÉDITIONS PARIS

This lamp is a light capsule enclosed in a high-polished brass case, with a mechanical hand-pull out system. The idea is to pull out only as much light as required. It could be used as a table lamp or a wall mounted fitting but the speciality of the ISP lamp is its ability to dim without a dimmer and to switch on/off without a switch. As physical as it is conceptual, it also gives the user the mechanical experience of 'taking out' the required light from a box, and then keeping it back in! | [www.dcw-editions.fr](http://www.dcw-editions.fr)

► Interestingly DCW Editions also celebrates Corbusier's lamps of the past, and Dominique Perrault's lamps of the future. ◀
