

**LISBON | SANTA CLARA 1728 | DAVIDE GROPPI**

In the historic centre of Lisbon, a 21st century building has been renovated and transformed into the Santa Clara 1728 hotel. The project was developed by architect Manuel Aires Mateus in collaboration with João and Andreia Rodrigues. To give depth to the rooms and to illuminate the entrances, passages and floors, the designers selected four lamp models by the Italian brand. The entrance hall is dominated by the giant suspended washi Moon lamp, while the dining room features the Simbiosi LED chandelier, a deconstructed, modular model, consisting of cylindrical lights and diodes connected by almost invisible red cables. The Neuro suspension lamp, which won the Design Plus 2014 by Light+Building award, is used for the bedrooms, while the passage areas feature the recessed Nulla lamps, winner of the Compasso d'Oro ADI 2014 award.
